Additional Hearing Information:

In the Clean Water Act, Congress gave states the responsibility to develop clean water goals. According to both state and federal law, these clean water goals - called water quality standards - must be formally reviewed on a regular basis. In fact, federal law mandates that this review take place no less often than every three years, hence its commonly-used name: the Triennial Review.

Water quality standards consist of stream-use classifications for surface waters (Chapter 0400-40-04), plus the general water quality criteria and antidegradation policy (Chapter 0400-40-03). These regulations were last reviewed beginning in 2009. The review for Chapter 0400-40-03 took extra time and the department took these rules back for additional public consideration in 2012. Because Chapter 0400-40-04 (stream-use classifications) did not have this additional round of public hearings, it is now time to consider revisions to that chapter.

Stream-use classifications identify the public's most likely uses of a specific waterbody. Those formal classifications in turn identify the specific criteria contained in Chapter 0400-40-03 that will then apply. Failure to meet these criteria for the assigned designated uses is the condition of pollution, according to the Tennessee Water Quality Control Act.

The review of stream-use classifications typically consists of the addition of newly discovered or created trout waters (added at the recommendation of wildlife agencies), the review of waters being used for domestic water supply, plus consideration of any other requested changes in classifications.

An initial set of draft rules has been prepared for public review and comment. For more information, including the "DRAFT" rules and "redline" copy, please visit TDEC's website at <http://tn.gov/environment/ppo/#water>.
